Gameplay programmer with 6+ years in Unity and growing Unreal Engine experience, with five completed and published projects on itch.io spanning gameplay systems, procedural generation, and narrative design. As a published novelist, I bring a rare technical + narrative combination that informs how I design systems and write for interactive media. Targeting gameplay programming and design roles.

GAME DEVELOPMENT

All Playable: <https://harborviewgames.itch.io>

Project Dunwell — Unity, Ink

June 2026

- Engineered a C# integration layer (InkBridge) connecting 45 Unity interactions to Ink narrative tags; synchronized story variables with case-board state to prevent evidence and branching paths from becoming inconsistent across three endings. Neither system accesses the other directly; the bridge coordinates through tag-driven events.
- Designed a nine-clue discovery system where players find and connect evidence in any order; a dictionary keyed on sorted clue-pair strings maps each connection to a unique narrative response, making progression order-independent without sacrificing story coherence.
- Implemented a dual-camera inspection system switching between third-person exploration and first-person object examination, with transform state preservation and restoration on context exit so no scene objects are displaced after interaction.

Toxic Piracy — Unity

July 2026

- Shipped a solo battle system in under a week (Made to Be Played jam) with distinct enemy AI, procedural ocean generation, and a risk-reward treasure/hazard loop driving emergent decisions.

HarborView GameTools — Unity Editor Tools (UPM Package)

July 2026

- Developed a reusable Unity Package Manager toolkit containing a modular character controller and population-spawning
- Built a reusable UPM package (character controller, population spawner, interface-driven architecture) now powering two in-progress vertical slices, Owed and Shrunk.

Tapped Out — Unity

September 2025

- Reverse-engineered and rebuilt Tapper-style lane timing, NPC queue logic, and scoring in Unity/C#, with a state-driven NPC system reacting to player input and delivery events.
- Designed state-driven NPC agents whose animations and behavior respond to player input, drink delivery events, and structured spawn patterns, achieving responsive feedback loops through careful timing calibration and playtesting.

CyberCity Runner — Unity

March 2025

- Built a procedural infinite scroller with object-pooled platform generation and adaptive enemy spawning scaled to player progression speed, maintaining consistent 60 FPS. Recently rebuilt with mobile touch controls (IPointerDownHandler/IPointerUpHandler) for hold-to-run input and optimized for WebGL deployment.

EXPERIENCE

Shopify & Content Consultant — Sipsy, Los Angeles, CA

Mar 2025 – May 2026

- Maintained 78+ Shopify product pages via custom HTML/CSS and wrote scan-first e-commerce copy, contributing to a ~3% increase in checkout starts.

Store Manager — Leewood Liquor, Eastchester, NY

Dec 2019 – Jan 2025

- Owned POS, inventory database, and online storefront implementation — doubling active SKUs (1,276 → 5,721) and driving a 7% year-over-year revenue increase.

EDUCATION

Bachelor of Arts in Creative Writing and Computer Science — State University of New York at Oswego 2016 – 2021

Published author — Smiling All The Time (2014) and So This is Home (2020), Outskirts Press Publishing — plus multiple short stories. Writing background informs narrative system design, branching dialogue, and environmental storytelling.

SKILLS

Technical: Unity, Unreal, C, C#, C++, Java, HTML, CSS, JavaScript

Tools: Git / GitHub, Visual Studio, VS Code, Unity Profiler, Blender, JIRA, Ink, Yarn Spinner

Languages: English (native), Spanish (native), French (conversational)
